

Wireless alarm system

SOMFY GUIDE

The Somfy wireless alarm system looks after your peace of mind

Motorization and automation of openings in your home (roller shutters, garage door, etc.) have a dynamic role to play in its security.

Enjoy greater peace of mind by fitting the new Somfy alarm system in your home.

The Protexial io wireless alarm offers a high level of protection and the comfort of a customized system.

Effective security

With the Somfy alarm, benefit from the latest home security technologies such as GSM alert system and video camera. Your alarm is interconnected with the motorized openings in the home to provide you with Active Security.

Customized security

The components of your wireless alarm system are attractive and discreet, to blend into your décor. The Somfy alarm system is modular. It fits exactly to the layout of your home and your lifestyle. Your installation can easily be changed at any time to suit your needs.

Security that's easy to live with

You have many control and monitoring options, from inside your home or from a distance, via a secure internet connection.

The Somfy Home Motion advantage: Active Security

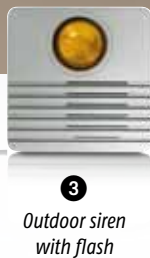

The Somfy alarm system interconnects with Somfy motorizations and home automation systems (gate, garage door, roller shutters). Your motorized equipment interacts with your alarm when activated, not only to detect and deter intruders more effectively, but also to report accidents in the home and make any evacuation easier.

Why choose Somfy?

As a player on the alarm market for the past ten years, Somfy has acquired recognised know-how in home security. The Somfy wireless alarm provides the best of current alarm technology.

Somfy quality

All elements of the Protexial io alarm system are guaranteed for 5 years. The Somfy alarm system complies with European standards (EN 50 130-4).

Efficient: your security, whatever happens

Somfy alarm provides the best security technology and guarantees
high level efficient protection.

Secured radio transmission with feedback

- The radio communication always uses two separate frequencies: information is transmitted even if there is interference on one of the frequencies.
- The feedback by beep or light indicator confirms that your alarm is activated, so you can leave home without any worries!

Your alarm is 100% independent

- The Somfy alarm is powered by standard batteries and works even in the event of accidental or intentional power failure.
- The low-power electronics mean that the batteries that power the system have a lifetime of four years.

Alert via GSM transmission

The alarm messages are transmitted via the GSM mobile phone network to your phone, even in the event of a power failure.

Video verification and intruder identification

- View images of your home via a secure server to verify or identify an intruder if an alert is given.
- You can perform 2-minute maximum remote checks on children or dependent persons.

Your installation is self-protected

- Permanent self-testing: the system components communicate continuously with the central unit: it alerts you when problems arise.
- Ripping out or opening any one of its components triggers the alarm.

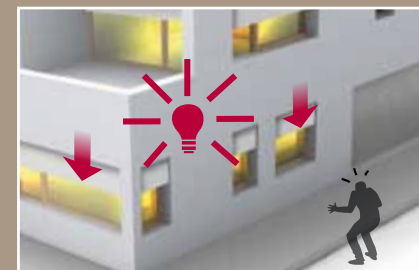

> **No false alarms.**
The Somfy alarm can tell the difference.

With its range of special detectors, the Somfy alarm system knows the difference between a small animal (a pet, or a bird landing on the patio, etc.) and a real intruder.

Boost your protection with “Somfy Active Security”

If your home already has Somfy motorized or automated equipment (gate, garage door, roller shutters, lighting, etc.), your alarm system interconnects with them. An extra step for your comfort and security!

EXCLUSIVE TO SOMFY

> ACT BEFORE THE INTRUSION

Thanks to an outdoor movement detector, the presence of an intruder is identified even before he enters the house.

Two choice levels:

1. A dissuasive “pre-alarm” level to repel intruders without alerting the whole neighborhood (lighting and the flash on the outdoor alarm come on, shutters close).
2. A “total trigger” level. The alarm sounds at full power and you are informed by the telephone transmitter.

> FACILITATE EVACUATION IN A FIRE

If smoke is detected, all the house's motorized shutters open instantly, making all openings accessible and thus facilitating evacuation.

> CENTRALIZE

To close all the openings in the home without missing any by a single click.

> REMOTE CONTROL AND MONITORING

To make sure you haven't forgotten anything and take action if necessary.

> MAKE IT LOOK AS IF SOMEONE'S HOME

When you are away, the Protexial io clock function makes it look as if someone was occupied by switching on lighting and opening and closing roller shutters at predefined times. The time can also vary every day.

The Somfy advantage with io-homecontrol®: FEEDBACK:

In real time to make sure that an order has been properly carried out and to check the status of each device (open/closed, on/off).

Customized security

For Somfy, peace of mind should be an extra level of comfort. With neither wires nor constraints, the Somfy alarm system perfectly adapts to your present and futur requirements.

A system that blends into your décor

The Somfy alarm system is 100% wireless and can be fitted without wiring the detection points and without damaging the walls. The components of the Somfy alarm are attractive and compact. They blend discreetly into all décors and keep a low profile. The contemporary design of the slim LCD keypad, the transmitter, the indoor siren and the opening contact have been awarded the Observeur Design 2010 label.

One system for all homes

The Somfy alarm system can be installed in each home. The modular design of the system is suitable for all configurations. Your installer has been trained to fit Somfy alarm solutions and will guarantee you a customized installation and state-of-the-art commissioning.

An upgradeable system to meet your needs

Your Somfy alarm system can be enhanced or extended whenever you want by adding components to the basic model: detectors, control points, etc., up to a total of 50 components.

YOU CAN DEFINE UP TO 3 SEPARATE PROTECTION ZONES

> PRESENCE MODE

When you're at home, certain zones may be protected and the alarm can be triggered immediately or deferred in the event of an intrusion.

> ABSENCE MODE

When you're out, all zones are alarm-protected.

Security easy to live with

Because everyone lives as he pleases, the Somfy alarm system adapts to the needs of the whole family. It is user-friendly and safely accessible to everyone, young and old.

THE CHOICE OF CONTROL UNITS TO OPERATE YOUR ALARM

AT HOME, THE LCD KEYPAD

Comfortable and easy for total or partial operation. Can also be used to control two home automated systems (gate, lighting, roller shutters, etc.). The feedback confirms that your order has been carried out.

THE BADGE: AS EASY AS PIE!

No code to remember: simply pass the badge in front of the keypad. Ideal for children!

THE REMOTE CONTROL: ALWAYS IN YOUR POCKET

Practical when you leave or return by car: the pocket remote control doesn't just enable or disable the alarm, it also opens or closes the gate and the garage door!

REMOTELY FROM A LANDLINE, SMARTPHONE, TOUCH TABLET OR COMPUTER CONNECTED TO THE INTERNET.

A secure, dedicated internet connection to control your alarm.

EXCLUSIVE TO SOMFY: TaHoma®

A unique interface to programme, control and monitor home equipment. From inside or remotely via a PC, smartphone or tablet connected to internet. TaHoma® is the ideal solution for a home with many equipment: it activates and de-activates the alarm and controls the others home equipment.
